

An introduction to statistical inference

Francisco Rodríguez-Sánchez

http://bit.ly/frod_san

Why statistics?

To answer questions like...

- ▶ what's the probability that something occurs?

To answer questions like...

- ▶ what's the probability that something occurs?
- ▶ does X influence Y? How much?

To answer questions like...

- ▶ what's the probability that something occurs?
- ▶ does X influence Y? How much?
- ▶ can we predict Y knowing X, Z... How well?

To ensure correct inferences

What statistical descriptors are best? (and why)

<https://pollev.com/franciscorod726>

Sampling, confidence intervals, and Bayesian inference

Inference: from samples to population

We rarely measure the whole **population**, but take **samples** instead.

Figure 5:

What's the average height in this class?

1. Write down your height and place of origin (Sevilla or other) in a piece of paper and put it in the bag.

What's the average height in this class?

1. Write down your height and place of origin (Sevilla or other) in a piece of paper and put it in the bag.
2. Now everyone **sample** 5 individuals from the whole **population** of heights.

What's the average height in this class?

1. Write down your height and place of origin (Sevilla or other) in a piece of paper and put it in the bag.
2. Now everyone **sample** 5 individuals from the whole **population** of heights.
3. Calculate the mean and 95% CI for your sample (<http://graphpad.com/quickcalcs/CImean1/>).

What's the average height in this class?

1. Write down your height and place of origin (Sevilla or other) in a piece of paper and put it in the bag.
2. Now everyone **sample** 5 individuals from the whole **population** of heights.
3. Calculate the mean and 95% CI for your sample (<http://graphpad.com/quickcalcs/CImean1/>).
4. Draw on blackboard.

What's the average height in this class?

1. Write down your height and place of origin (Sevilla or other) in a piece of paper and put it in the bag.
2. Now everyone **sample** 5 individuals from the whole **population** of heights.
3. Calculate the mean and 95% CI for your sample (<http://graphpad.com/quickcalcs/CImean1/>).
4. Draw on blackboard.
5. Do all CIs contain true mean height?

If the 95% CI of X is (120, 150)...

- ▶ There is a 95% probability that X lies between 120 and 150

<https://pollev.com/franciscorod726>

If the 95% CI of X is (120, 150)...

- ▶ There is a 95% probability that X lies between 120 and 150
- ▶ We can be 95% confident that X lies between 120 and 150

<https://pollev.com/franciscorod726>

If the 95% CI of X is (120, 150)...

- ▶ There is a 95% probability that X lies between 120 and 150
- ▶ We can be 95% confident that X lies between 120 and 150
- ▶ If we repeated the experiment, 95% of the time X would fall between 120 and 150

<https://pollev.com/franciscorod726>

If the 95% CI of X is (120, 150)...

- ▶ There is a 95% probability that X lies between 120 and 150
- ▶ We can be 95% confident that X lies between 120 and 150
- ▶ If we repeated the experiment, 95% of the time X would fall between 120 and 150
- ▶ If we repeated the experiment, 95% of the CIs would contain the true value of X

<https://pollev.com/franciscorod726>

If the 95% CI of X is (120, 150)...

- ▶ There is a 95% probability that X lies between 120 and 150
- ▶ We can be 95% confident that X lies between 120 and 150
- ▶ If we repeated the experiment, 95% of the time X would fall between 120 and 150
- ▶ If we repeated the experiment, 95% of the CIs would contain the true value of X
- ▶ The probability that X is greater than 0 is at least 95%

<https://pollev.com/franciscorod726>

If the 95% CI of X is (120, 150)...

- ▶ There is a 95% probability that X lies between 120 and 150
- ▶ We can be 95% confident that X lies between 120 and 150
- ▶ If we repeated the experiment, 95% of the time X would fall between 120 and 150
- ▶ If we repeated the experiment, 95% of the CIs would contain the true value of X
- ▶ The probability that X is greater than 0 is at least 95%
- ▶ The probability that X equals 0 is smaller than 5%

Understanding confidence intervals

- ▶ Summarise **uncertainty** in parameter estimates.
- ▶ <https://rpsychologist.com/d3/CI/> (or here)
- ▶ A 95% CI is **NOT** 95% likely to contain the true parameter value!

Understanding confidence intervals

- ▶ Summarise **uncertainty** in parameter estimates.
- ▶ <https://rpsychologist.com/d3/CI/> (or here)
- ▶ A 95% CI is **NOT** 95% likely to contain the true parameter value!
- ▶ Instead, 95% of the CIs obtained with this sampling will contain the true value.

Understanding confidence intervals

- ▶ Summarise **uncertainty** in parameter estimates.
- ▶ <https://rpsychologist.com/d3/CI/> (or here)
- ▶ A 95% CI is **NOT** 95% likely to contain the true parameter value!
- ▶ Instead, 95% of the CIs obtained with this sampling will contain the true value.
- ▶ Like person who tells truth 95% of the time, but we can't tell if a particular statement is true.

Understanding confidence intervals

- ▶ Summarise **uncertainty** in parameter estimates.
- ▶ <https://rpsychologist.com/d3/CI/> (or here)
- ▶ A 95% CI is **NOT** 95% likely to contain the true parameter value!
- ▶ Instead, 95% of the CIs obtained with this sampling will contain the true value.
- ▶ Like person who tells truth 95% of the time, but we can't tell if a particular statement is true.
- ▶ It's a frequentist, long-run property.

Understanding confidence intervals

- ▶ Summarise **uncertainty** in parameter estimates.
- ▶ <https://rpsychologist.com/d3/CI/> (or here)
- ▶ A 95% CI is **NOT** 95% likely to contain the true parameter value!
- ▶ Instead, 95% of the CIs obtained with this sampling will contain the true value.
- ▶ Like person who tells truth 95% of the time, but we can't tell if a particular statement is true.
- ▶ It's a frequentist, long-run property.
- ▶ To read more: Morey et al (2015)

What happens if we increase sample size?

<https://rpsychologist.com/d3/CI/>

- ▶ CI width *decreases* . . .

What happens if we increase sample size?

<https://rpsychologist.com/d3/CI/>

- ▶ CI width *decreases* . . .
- ▶ but still 5% of CIs will NOT contain true mean!

Bayesian credible intervals

- ▶ Bayesian **credible** intervals do give the probability that true parameter value is contained within them.

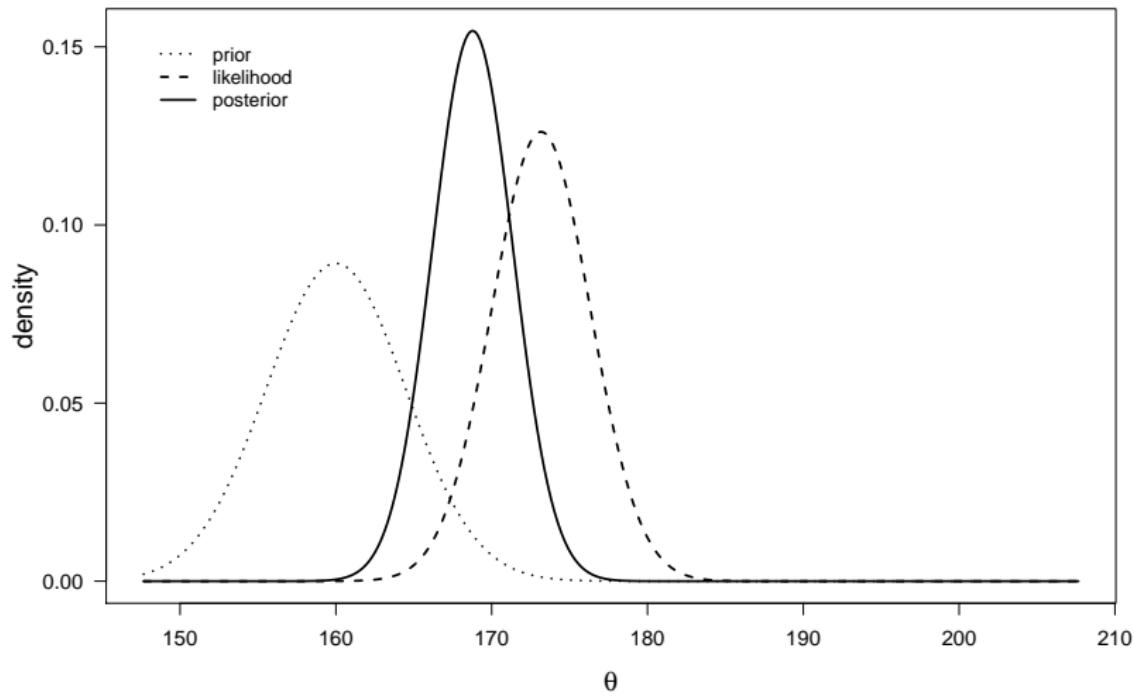

Bayesian credible intervals

- ▶ Bayesian **credible** intervals do give the probability that true parameter value is contained within them.
- ▶ Frequentist CIs and Bayesian credible intervals can be similar, but not always.

Bayesian inference: prior, posterior, and likelihood

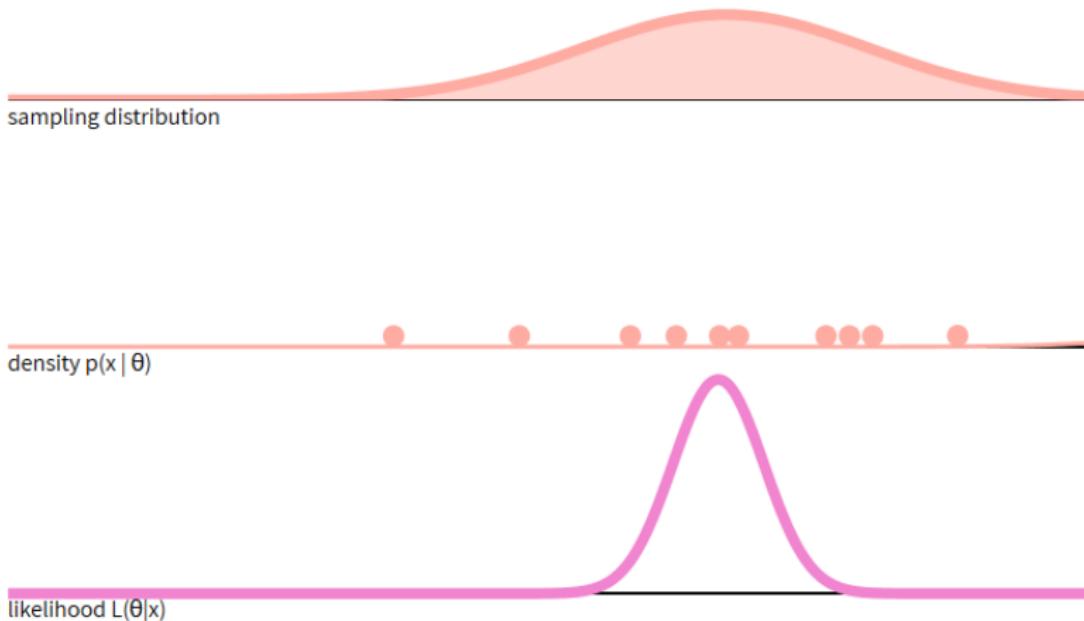

$$P(H|D) \propto P(D|H) \times P(H)$$

$$\text{Posterior} \propto \text{Likelihood} \cdot \text{Prior}$$

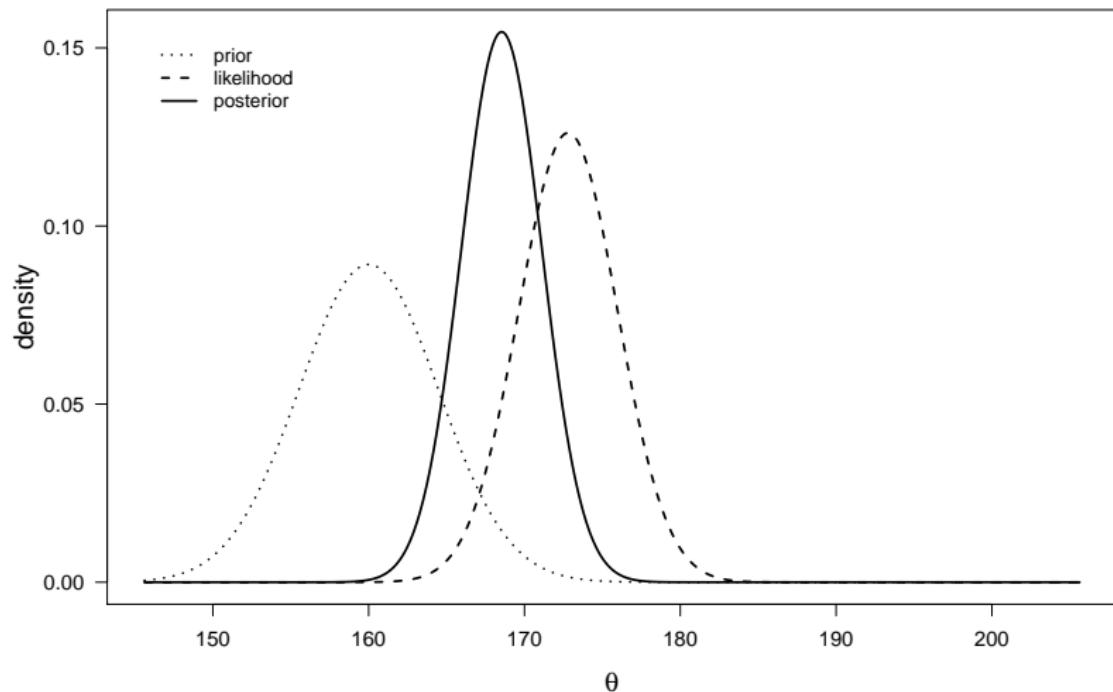

What is the likelihood?

$$L(\theta|x) = P(x|\theta)$$

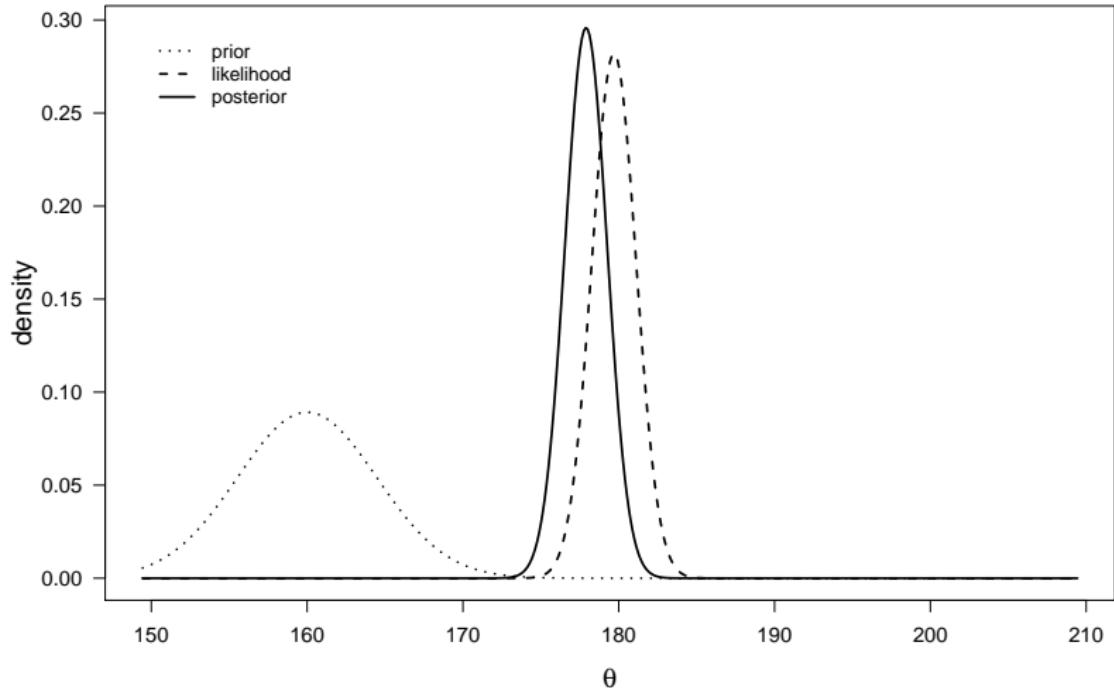

<https://seeing-theory.brown.edu/bayesian-inference/index.html>

Bayesian inference: prior and likelihood produce posterior

\$posterior.mean

With increasing sample size, likelihood dominates prior

\$posterior.mean

ABSTRACT

One of the main questions that ecologists pose in their investigations includes the analysis of differences in some trait between two or more populations. I argue here that asking whether there are differences or not between populations is biologically irrelevant, since no two living things are ever equal. On the contrary the appropriate question to pose is how large differences are between populations. That is, we urge a shift in interest from statistical significance to biological relevance for proper knowledge accumulation. I empha-

P value

- ▶ Tell me...

P value

- ▶ Tell me...
- ▶ Very complicated concept: even statisticians fail to describe it well.

P value

- ▶ Tell me...
- ▶ Very complicated concept: even statisticians fail to describe it well.
- ▶ Probability of observing data as or more extreme than these *if H₀ was true.*

P value

- ▶ Tell me...
- ▶ Very complicated concept: even statisticians fail to describe it well.
- ▶ Probability of observing data as or more extreme than these *if H₀ was true*.
- ▶ Low P-value: data unlikely if H₀ was true.

P value

- ▶ Tell me...
- ▶ Very complicated concept: even statisticians fail to describe it well.
- ▶ Probability of observing data as or more extreme than these *if H₀ was true*.
- ▶ Low P-value: data unlikely if H₀ was true.
- ▶ Large P-value: data not unusual if H₀ was true.

Are differences *significant*?

- ▶ If $p < 0.05$, we **reject** H_0 .

Are differences *significant*?

- ▶ If $p < 0.05$, we **reject** H_0 .
- ▶ If $p > 0.05$, we **fail to reject** H_0

Are differences *significant*?

- ▶ If $p < 0.05$, we **reject** H_0 .
- ▶ If $p > 0.05$, we **fail to reject** H_0
- ▶ (which is **NOT** the same as ' H_0 is true')

Are differences *significant*?

- ▶ If $p < 0.05$, we **reject** H_0 .
- ▶ If $p > 0.05$, we **fail to reject** H_0
- ▶ (which is **NOT** the same as ' H_0 is true')
- ▶ **CAUTION:**

Are differences *significant*?

- ▶ If $p > 0.05$, we **fail to reject** H_0
- ▶ (which is **NOT** the same as ' H_0 is true')
- ▶ **CAUTION:**
- ▶ This is **very widespread, but incorrect** practice.
- ▶ P-value is continuous. We must **avoid binary decisions** based on **arbitrary thresholds**.
- ▶ More on this later.

Let's do the test

```
t.test(h.sevi, h.out)
```

Welch Two Sample t-test

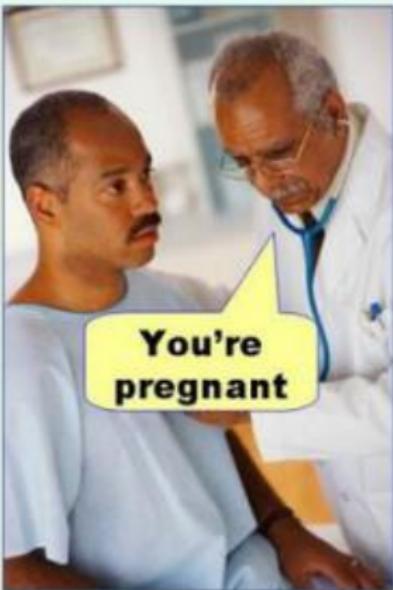

```
data: h.sevi and h.out
t = -0.20558, df = 6.346, p-value = 0.8436
alternative hypothesis: true difference in means is not equal to
95 percent confidence interval:
-14.0216 11.8216
sample estimates:
mean of x mean of y
172.2      173.3
```

Are heights different then?

Rejecting hypotheses: two types of error

Type I error

(false positive)

Type II error

(false negative)

Figure 10:

Rejecting hypotheses: two types of error

Statistics: Hypothesis Test	Null Hypothesis is True	Null Hypothesis is False
Reject Null Hypothesis	Type I Error	Correct
Fail to Reject Null Hypothesis	Correct	Type II Error

Figure 11:

Understanding NHST

<http://rpsychologist.com/d3/NHST/>

Example: biased coin

```
[1] 0 1 1 1 0 1 1 0 1 0
```

```
1-sample proportions test with continuity correction
```

```
data: sum(coin) out of ntrials, null probability 0.5  
X-squared = 0.1, df = 1, p-value = 0.7518
```

```
alternative hypothesis: true p is not equal to 0.5
```

```
95 percent confidence interval:
```

```
0.2736697 0.8630694
```

```
sample estimates:
```

```
p  
0.6
```

NHST and p-values

In ecology, everything is somewhat different

Are there any differences? A non-sensical question in ecology

ABSTRACT

One of the main questions that ecologists pose in their investigations includes the analysis of differences in some trait between two or more populations. I argue here that asking whether there are differences or not between populations is biologically irrelevant, since no two living things are ever equal. On the contrary the appropriate question to pose is how large differences are between populations. That is, we urge a shift in interest from statistical significance to biological relevance for proper knowledge accumulation. I empha-

Instead of falsifying a null model, estimate effects and compare meaningful models

P-value depends on sample size

P-value depends on sample size

- Same real difference is detected as significant or not depending on sample size:

Real difference = 40 g

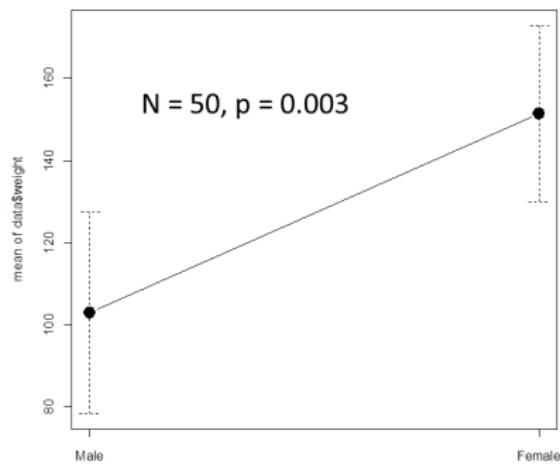

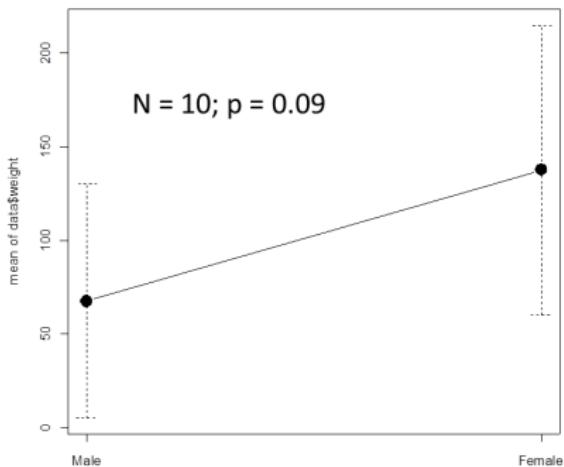

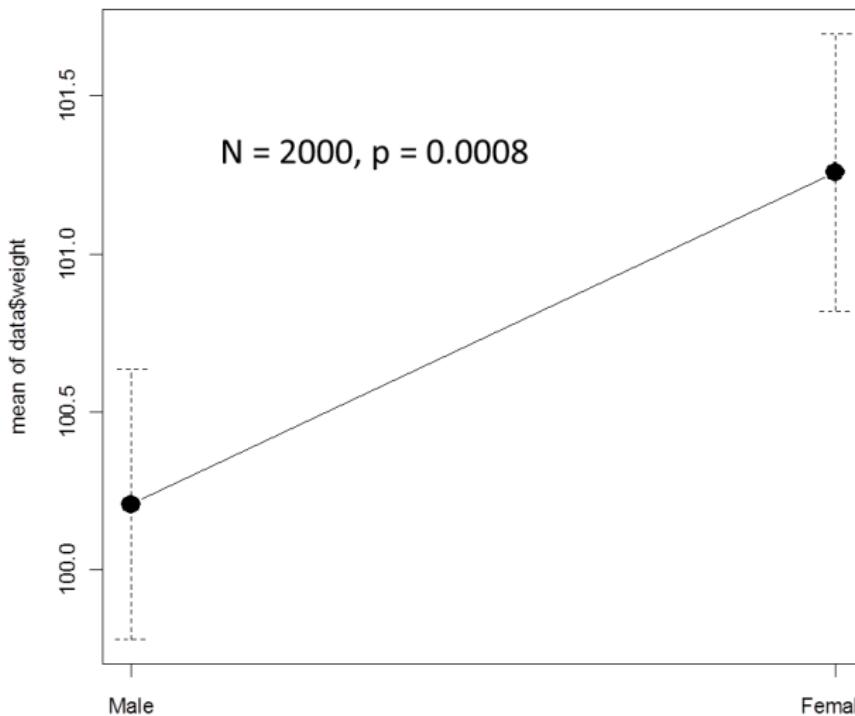

Figure 15:

Statistically significant != biologically important

- With big sample size, we can find **highly significant but biologically unimportant** differences.

Real difference = 1 g

Statistically significant \neq biologically important

- ▶ Statistically significant = unlikely to be zero

Statistically significant != biologically important

- ▶ Statistically significant = unlikely to be zero
- ▶ Good read: *significantly misleading*

Statistically significant != biologically important

- ▶ Statistically significant = unlikely to be zero
- ▶ Good read: *significantly misleading*
- ▶ My suggestion: avoid significant/not significant (and maybe p-values too)

Statistically significant != biologically important

- ▶ Statistically significant = unlikely to be zero
- ▶ Good read: *significantly misleading*
- ▶ My suggestion: avoid significant/not significant (and maybe p-values too)
- ▶ Beyond significance, look at *effect sizes*.

'Not significant' does NOT mean 'there is no effect'

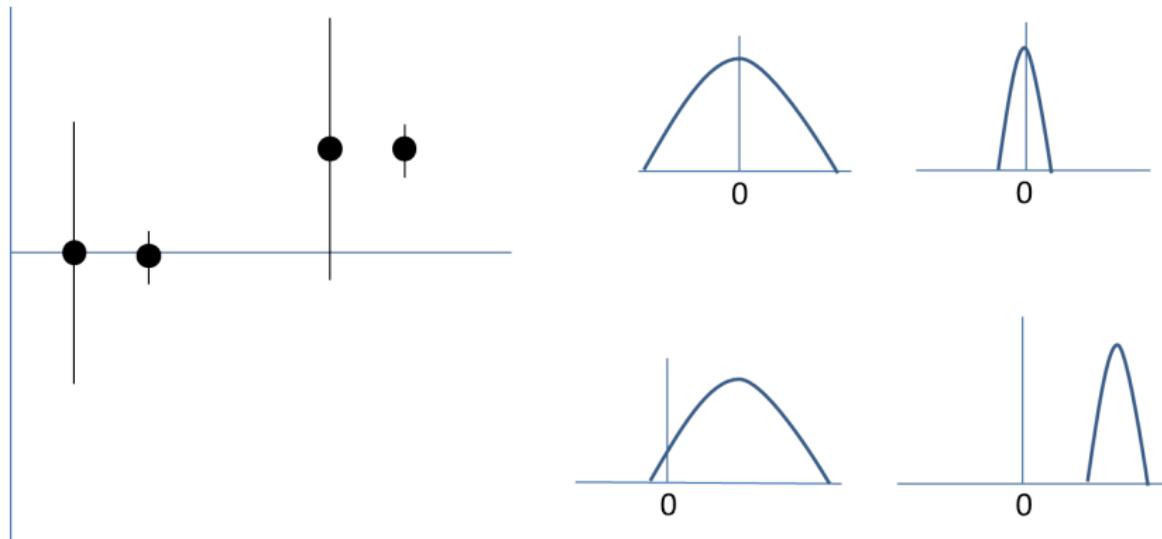

Figure 17:

- ▶ **Absence of evidence \neq Evidence of absence**

Failure to reject H_0 $\neq H_0$ is true

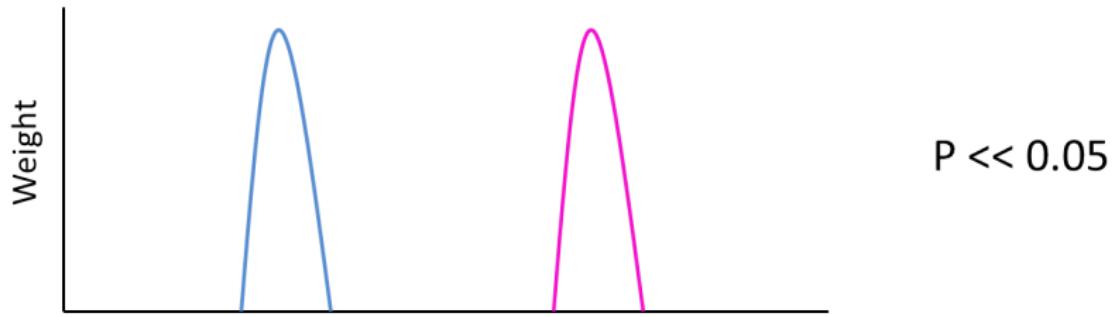

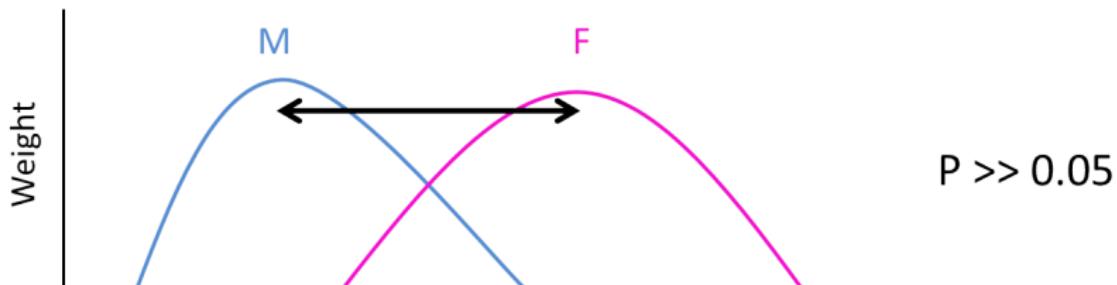

Figure 18:

p-value > 0.05?

"We were unable to find evidence against the hypothesis that A = B with the current sample size"

Is it safe to allow right turn with red lights?

- ▶ Right turn not allowed: 308 accidents

<https://www.statisticsdonewrong.com/power.html#the-wrong-turn-on-red>

Is it safe to allow right turn with red lights?

- ▶ Right turn not allowed: 308 accidents

ASA statement on p-values

- ▶ P-values do not measure the **probability of hypothesis** being true, or the probability that the data were produced by **random chance** alone.

<https://doi.org/10.1080/00031305.2016.1154108>

ASA statement on p-values

- ▶ P-values do not measure the **probability of hypothesis** being true, or the probability that the data were produced by **random chance** alone.
- ▶ Scientific conclusions or policy decisions should NOT be based only on **whether a p-value passes a specific threshold**.

<https://doi.org/10.1080/00031305.2016.1154108>

ASA statement on p-values

- ▶ P-values do not measure the **probability of hypothesis** being true, or the probability that the data were produced by **random chance** alone.
- ▶ Scientific conclusions or policy decisions should NOT be based only on **whether a p-value passes a specific threshold**.
- ▶ P-value, or statistical significance, does not measure the **size of an effect** or the **importance** of a result.

<https://doi.org/10.1080/00031305.2016.1154108>

ASA statement on p-values
